Phone 024952424 Monday to Saturday 8am to 6pm excluding public holidays Phone 024952424. Find out here how to install Home Connect appliances and connect them to the app. How to register and create your account Download the Home Connect app onto your smartphone or your tablet PC either from the Apple App Store or from the Google Play Store and install it. With the device connected to the WiFi network at the location of the HomeConnect-enabled home appliance, open the Home Connect app. Enter your first name and surname, your email address user ID and any further information if required. Enter a password you have chosen yourself and confirm this. You will receive an email confirming your registration which contains a validation link. Confirm your registration by clicking on the validation link within 10 days. In some cases, certain settings need to be changed manually. If necessary, please check the following settings on your router. You can find information on the configuration settings in the installation instructions for your router. WPS configures the WiFi security automatically for WiFi Protected Setup-enabled network devices. Open networks are not suitable for use with Home Connect. Home appliances are only compatible with a 2.4 GHz band. When you connect an appliance, please change the settings for your network accordingly. If the router on your home network has a WPS function, you can log the home appliance into the network automatically. If your router does not have a WPS function, or if you are not sure if it does, simply log your home appliance into the home network manually. How to integrate a home appliance into the home network The Home Connect wizard on your home appliance will display how to connect the appliance to your home network. A detailed description of the necessary steps can also be found in the insert which is supplied with your new home appliance.

Automatic network login The Home Connect wizard will attempt to automatically log in the relevant home appliance via the WPS function on your router you can find information about WPS in the instructions for your router. If you have enabled automatic login, you need to confirm the connection by pressing down the WPS button on your router within two minutes. As soon as the home appliance is successfully connected to your home network, a message appears in the appliance display confirming this. Manual network login You can also enable and set up the network login manually. The home appliance now establishes its own WiFi network which you can access using your smartphone or tablet PC. Now open the WiFi settings on your mobile device and connect it to the available Home Connect WiFi for your home appliance password HomeConnect. You will now be able to see the home appliance in the Home Connect app on your smartphone or tablet PC and you can transfer the access details for your home network WiFi to the home appliance and thus integrate it into your home network. How to connect a home appliance to the app If the relevant home appliance is logged into your home network, all you need to do is connect it to your Home Connect account. To do this, open the Home Connect app on your mobile device and log in. Since this step may vary on different home appliances, please see the insert supplied with your home appliance. The app automatically detects your appliance. Then get in touch and use our Customer Service. We are happy to help. And not just when you're at home, when you're out and about too. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with Bosch Appliances Microwave Oven Manuals. To get started finding Bosch Appliances Microwave Oven Manuals, you are right to find our website which has a comprehensive collection of manuals listed.

Download them for your Android smartphone from the Google Play Store or for your iPhone from the Apple App Store. The last option is to reset your Smart Home Controller. All components must then be relearned. What can I do I dont know. If you are not at home, make sure that your system is enabled for remote access. You will then need an Internet connection via your mobile phone. How do I set the temperatures for my home. You can set the temperature of your home conveniently and individually for each room using the Bosch Smart Home App. To do this, go to the start screen in the app and select the room in which you want to set the temperature. This is possible by setting the heating and setback temperature and by setting the timer. You can also set the heating temperature manually by either setting the manual mode or adjusting the temperature in the app or directly on the thermostat. In this case, the manually set temperature remains set only up to the next switching point. Further information can be found in the operating instructions for the radiator thermostat. Scenarios and alarm system What are scenarios. You can use the scenarios to link different Smart Homeenabled devices with each other. You can create new scenarios in your app at any time so that a whole range of devices can adapt to your needs at the touch of a finger. What does the alarm system contain. With the alarm system you can quickly and easily make your home safer. At the

same time, you will receive a push message on your smartphone.

Smart Home Controller What is a Bosch Smart Home Controller. The Bosch Smart Home Controller is the heart of your Bosch Smart Home System. It networks and controls all other Smart Home devices and the Bosch Smart Home App. How do I install the Bosch Smart Home Controller. The Smart Home Controller can be installed in just a few simple steps. All you need is the Bosch Smart Home App and the accessories included in the package. After starting the Bosch Smart Home App, it guides you through the individual installation steps. The easiest way is to take a look at the stepbystep instructions in our installation video or download the installation instructions as a PDF file. What exactly does the Bosch Smart Home Controller come with. The scope of delivery and the technical data of the Bosch Smart Home Controller can be found on the product page in our online shop. What is the radio range of the Smart Home Controller. The radio range of the Smart Home Controller is similar to the WLAN signal of your router, fixed at about 30 meters inside a building or 100 meters outside. This may vary depending on local conditions. Among other things, reinforced concrete ceilings or underfloor heating can deteriorate the radio signal. Please make sure that your Smart Home Controller is positioned as centrally as possible in your household. For an optimal connection of the Smart Home products to the controller, they should be at least one meter away from the Smart Home Controller. The Smart Home Controller should also be at least one meter away from your WLAN router, otherwise interference may occur. What do the lights on the Smart Home Controller mean. The Smart Home Controller is equipped with three control LEDs the Power LED, the LAN LED and the Cloud LED. You will find an overview of the various light combinations in the installation instructions for the Smart Home Controller.

Depending on whether you have activated or deactivated remote access, either the power LED and the LAN LED or the cloud LED should light up white throughout during operation. If this is not the case and your system does not function properly, wait briefly or try to disconnect the Smart Home Controller and, if necessary, your router from the power supply for a short time. After a short wait, reconnect the Smart Home Controller and router to power so that a new connection is established. Does the Smart Home Controller establish a connection to the Internet even without remote access. The Bosch Smart Home Controller, and thus also the entire Bosch Smart Home System, requires an Internet connection at regular intervals to function properly. This is required to establish the time and connection to the Bosch Smart Home update server. In the latter case, the controller sends its ID, the version number and the country in which the SHC is located. No further data will be transmitted. How can I reset the Smart Home Controller and my system to factory settings. Please make sure that all Smart Home devices are connected to the Smart Home Controller at the time of resetting. Once you have reset the Smart Home Controller to the factory settings, all unconnected devices are deleted from the system. If you have several smartphones integrated, please delete all corresponding data from the additional smartphones. If a reset via app is not possible, perform the reset directly on the device. A corresponding video can be found here. After resetting the controller, you must also reset all connected devices. Will data be lost if the Smart Home Controller is reset to factory settings. If you reset your Bosch Smart Home Controller to the factory settings, all data will be deleted from your Smart Home System. Where can I find the IP address of my Smart Home Controller.

In a few cases, you may be prompted to enter the IP address of the Smart Home Controller during the installation of the Smart Home Controller. You can obtain this by connecting an empty USB stick to the USB port of your Smart Home Controller and waiting briefly. The IP address is stored here under IP address. You can also find the IP address of the Smart Home Controller in the settings of your router. Smartphone and Internet connection Which smartphones can be used to operate the Bosch Smart Home App. The app currently supports smartphones with the operating systems Android from 4.4 or iOS from 12. Can I use my Bosch Smart Home System offline. It is possible to

use the system in your own WLAN without Internet access as long as the Smart Home Controller has an Internet connection at startup. However, the Smart Home Controller will not receive any further updates in this case. In addition, the disconnected Internet connection is signalled by a red blinking cloud LED. If you want to run the system completely offline, you can deactivate remote access in the app settings. Please note that the devices can then only be controlled via the app in the WLAN.

Radiator thermostat What is a Bosch Smart Home radiator thermostat. The Bosch Smart Home radiator thermostat is an individually adjustable thermostat with an illuminated LCD display and control LED to regulate the room temperature. Find out more about the Bosch Smart Home radiator thermostat on the product page. How can I reset my radiator thermostat. To perform a reset on your device, please proceed as follows To do this, open the battery cover Remove a battery When reinserting the battery, press the mode button circular button on the underside until the thermostat LED flashes orange quickly Release briefly and press the button again until the LED lights green Then follow the connecting instructions again The easiest way is to take a look at the stepbystep instructions in our video.

The Bosch Smart Home App allows you to store individual temperature profiles for each room. To set these profiles, select the respective room in the main menu of the app. With a wipe to the left, you can now choose automatic or manual operation. If you move the screen further to the left, you will reach the timer. Here you have the option of setting and saving individual switching times for heating or lowering for each day. The thermostats strongly increase the heat output for a short period of time in order to bring the room temperature to the desired level as quickly as possible.

How do I install the Bosch Smart Home radiator thermostat. The Bosch Smart Home radiator thermostat can be installed in just a few simple steps. All you need is the Bosch Smart Home App, the accessories included in the package, and possibly a pipe wrench. What exactly does the Bosch Smart Home radiator thermostat come with. The scope of delivery and the technical data of the Bosch Smart Home radiator thermostat can be found on the product page in our online shop. How do I attach the Bosch Smart Home Radiator Thermostat. The Bosch Smart Home radiator thermostat can be attached to almost all radiators. All you have to do is remove your old thermostat and attach the Bosch radiator thermostat. You may need an adapter for your existing valve. If the supplied adapters do not fit, you have the option of purchasing additional adapters. The assignment of the available adapters to the valves can be found here. Please check also our stepbystep installation video. In the App settings of your thermostats, you can switch a child lock on or off. This ensures that a manual change directly at the thermostat is no longer possible, but can only be controlled via the app. The Bosch Smart Home radiator thermostat does not fit my heater. If the Bosch Smart Home radiator thermostat does not fit on your radiator, use one of the supplied adapters if necessary.
