Yes, it has continued to wash clothes for several hours while I was at work and the count down stays at 1 minute left, it never finishes, it never changes cycles. Sometimes it just doesnt spin the clothes, it will get to the spin cycle, and just slowly spin for ever without getting up to full spin speed, again, it never finishes its process. Sometimes the door lock doesnt work, it will not unlock, and just keeps trying to unlock again and again. Sometimes I hit pause and it causes an error, and it starts the drain and spin cycle immediately. No wonder Bosch stopped making washers and dryers. After a disaster of a machine like this, I am sure they have lost all credibility in the product category. From other reviews of the Bosch Vision 500 I have read, it seems I am definitely not alone.Please try again later. Please try again later. Vivian 1.0 out of 5 stars I am very disappointing on Bosch washer that cannot last more than 3 years and I will never purchase Bosch washer again in my life.Please try again later. Alison Toon 2.0 out of 5 stars However, I wish I had bought a different washer and spent more time choosing it. I made a quick buy based on price and immediate availability, when moving into a new home that had no washer or dryer. I come from Europe and am

used to, and expect, frontloader washers. I expect more features, better usability, and much better quality than I have with this washer. http://ghefootmassage.com/fckeditor_userfiles/composicion-tipografica-manual.xml

Problems Almost impossible to find, open, clean and replace the seal of in a watertight way the lint trap. You have to pry the frontbottom cover of the washer off with a screwdriver through holes located on the sides, both sides, of the washer, so you first have to pull it out from wherever its installedyou cannot remove the cover from the front only. The screwon top to the trap is at an awkward angle inside the machine. Any grit that has accumulated within the lint trap gets trapped in the threads and makes it almost impossible to replace the top and make it fully watertight. As its a good practice to clean the lint trap regularly, this is REALLY poor design. All other washers that I have used have the trap cover in an easilyaccessible place. Theres no way to program for an extraheavilysoiled wash i.e., no prewash program. Program choices are very limited. THAT DARN PINGING that goes on, and on, and on when the wash is finished. Yes, you can turn it off but as its a matter of pressing certain buttons in a certain order, it resets itself on a regular basis and PING PING PING PING PING darnit I know the wash has finished and Ill empty it in my own good time stop PINGING. Please. And a note for anyone installing any washer and dryer. Make sure to ask the installers to put the washer on the left and the ddryer on the right, otherwise they WILL do it the other way around. And then when you go to wash something, youll find the doors open towards each other. Then youll either have to reinstall both the washer and dryer, or keep struggling to move the wet washing over the doors into the dryer. NOTE TO SELF remember this next time! Good points its a frontloader washing machine, it washes clothes well, it has an ecofriendly setting lower temperature, and it does the job. If I were buying again, Id go slightly more upscale. Our technician has been here half a dozen times trying to fix it. The entire door latch mechanism, and some other surrounding parts, have been replaced, but that doesnt fix the problem. Even before this problem started, it had a bad feature of retaining water in the folds of the front rubber gasket. You have to towel out the excess water every time you finish a wash. If you dont, the machine will soon stink. This is an annoying piece of junk. Please try again later. Please try again later. MM 5.0 out of 5 stars The Bosch Vision is different from other machines Ive owned in the past in terms of cycle selection, temperatures and options so it does pay to familiarize yourself with the manual before use but its not difficult to get up to speed in 15 or 20 minutes of reading. I do agree with one reviewer who said the handwash cycle isnt great for removing stains or deep cleaning. It is a very short cycle designed to keep delicate clothes in top condition and at this it succeeds, just dont expect deep cleaning power. I do generally run most cycles with an extra rinse but this machine cleans with incredibly small amounts of water, even with the additional rinse the total water consumption is very low. Im amazed at how little detergent is necessary to achieve a bright, fresh appearance and feel to all my clothes. The manual warns about using too much detergent and I think other users either do not read the manual or dont understand how little is needed for optimal cleaning. I use Method liquid detergent which says four pumps is for one load. Ive experimented with different amounts of detergent and learned that most small to moderate sized loads of normal soiling get super clean with only one pump of detergent. For more heavily soiled loads with oils, greases, sweat and other contaminants that break down the detergent Ive found two pumps provides better excellent results.

<https://www.becompta.be/emploi/3g3mv-manual-omron-1>

I might use three or four pumps but only for large loads of clothes worn by a deep fry cook or mechanics overalls full of oil residues. And at 4.4 cubic ft. you can do some rally large loads. I washed a load of really absorbent thick white cotton bath towels that completely filled the drum

using two pumps of Method detergent and one ounce or regular bleach and they came out smelling fresh, looking bright and super soft and fluffy. Smooth and as close to silent as one could hope for the sound barely changes from small to huge loads and Ive the machines have never shaken or vibrated regardless of load size. I dont understand the problem some have reported with mold. The only precaution Ive taken is to leave the washer door slightly ajar for one day after Ive done laundry then I close it if I want and there has been nothing but fresh, clean smells. I cant say that about my first frontload laundry pair Maytag Neptune. They molded within the first month or so and the smell never went away even after I had the redesigned seal installed. And the Neptune never got my clothes completely clean. The Bosch manual says too much detergent can cause mold and I think this is the likely culprit for those who have reported a moldy smell from the Bosch. Only use a small amount of detergent, less than you think will work. You will save a lot on detergent costs and have clothes that are cleaner and fresher than ever. This is a difficult concept to come to terms with for people who are accustomed to waterguzzling top loaders. Please try again later. Please try again later. Consumer66061 2.0 out of 5 stars They are probably okay if you are a complete Nimrod, and want the standard settings on the machine to do the thinking for you, but I have been doing laundry many years now, and I know what temperature, cycle, etc. It does however, think that a choice of spin speed is vitally important, because you can change that on every cycle.

<https://www.nelsonrigg.com/images/canon-super-g3-facsimile-manual.pdf>

I dont really know what temperature these wash in and unless you refer to the graph in the manual, you wont, so I only use them for those things that have been washed 1000 times before. Many cycles seem extra long the Xtra Sanitary cycle is about 3 hours long when you add a stain cycle. And you may think I am kidding on this next thing, but the minutes during the countdown of a wash cycle are sometimes much longer than a minute. One time, a cycle had one minute left for 5 minutes and this is not the same everytime Seriously. Now, let me be straight, I have found nothing seriously adverse about the way they clean the clothes. Thats pretty standard. The drying on the other hand, takes some creativity on which cycle usually cycles to choose to get the stuff dry in the least amount of time. The end cycle signals are the MOST annoying feature. They ring incessantly okay, thats a lie. they do stop after sometime longer than 20 minutes of beeping about every 6 seconds. I havent let the beep go on much longer than that, because it drives us crazy but if you are trying to sleep or just cant get to the washer right away it will drive your whole household insane until someone rushes in and opens the washer door to stop it. How many times do you have to be reminded that the wash cycle is finished. Once or twice would suffice, right. The dryer also has its own annoying cycle beeps which can be changed if you want to. I am still figuring this out. Rinsing well seems to be a problem, and I only use 12 tablespoons of detergent, as recommended, even if you add the Allergy Rinse. This leads me to vibration mode. On Max Spin our whole house vibrates sounds like a helicopter is hovering overhead. We have now opted to choose a lower spin speed each time we start another load, if we actually remember to do it. We, after wrenching these two monster units into place in our newly remodeled laundry room, erroneously assumed we could switch the washer door opening, as we could on the dryer. Uhuh.

<http://ablerepairandrestoration.com/images/canon-sure-shot-105-zoom-35mm-camera-manual.pdf>

So now we have a washer that opens to the wrong side. Umm, what else Oh, yes. the drying cycles on the dryer of course restart their time ALL OVER AGAIN if you happen to want to open the door to check on how your load is doing, or add another item. For example, if you have chosen a cycle that takes 60 minutes, and its been running for 40 minutes and you are wondering if your shirt is dry enough yet so you open the door to check on that shirt and no, its not dry enough so you throw it back in and close the door. The timer then automatically resets back to 60 minutes no kidding. You get to start all over again, or choose another cycle entirely. So, if I had enough money to give these away, and get another brand like my old LGs, I would. If this helps someone else avoid some angst,

then it has been worth my time. Please try again later. Please try again later. eMCee2 2.0 out of 5 stars The kicker for me is that we bought our set in March 2010; I started getting E17 errors just under 2 years later. The part was replaced under warranty, but of course the labour was not. While the local service people were good, the Bosch service center response left a lot to be desired. Now, about 14 months later. There are some stupid design things on the companion dryer as well. Doubt I will be buying a Bosch again. Please try again later. Please try again later. If I were asked to imagine a day in my life doing laundry 20 years from now, I would naturally expect this to be the machine I'd be using. Please try again later. Please try again later. Plus, some consumers have reported that the washer instructions or manual is missing from the package when delivered. Consumer Opinions Pros Uses EcoSmart technology Uses ActiveWater feature Offers 15 washing cycles Has an XtraSanitary feature for efficient cleaning and washing Comes with a two-year warranty Stainless steel tub Backed by a Good Housekeeping seal Uses an AVS AntiVibration system Easy to use and energy efficient Packed with a variety of useful features NSF certified for effective antibacterial action Delicate cycle is perfect for special items with sensitive fabric Has an Energy Star rating Cons Is a bit expensive Some packages have missing manuals and product instructions Now the machine won't spin and there are no service techs where I live. The 800 number folks can't help.

Totally unacceptable! Now at the ripe age of three it is leaking from the soap tray and peeling the paint. Also stuck with the matching dryer which takes two hours to dry sheets cuz it rolls them into a tube! It goes thru all the cycles except the final high speed spin. I'm talking about water dripping off the clothes wet at the end of the cycle. This also makes it smell old and musty. We had the certified Bosch repairman out a few times, but they just can't fix it. I understand things don't always work perfectly, but it's frustrating to pay a repairman and they still can't fix it! Other than a drumweight nut and bolt needing a bit of Loctite to prevent the nut loosening, the washer has been fabulous. Our clothes are very clean with less energy and water. It holds a large load and the door is big. The spin speed is surprising at first, but it is very effective. My washer is on concrete and is perfectly level. It has not moved from its spot. Noise levels are not bad. I live in Florida near the coast, and I have had no mold or odor problems. Simply wipe the door seal gasket all the way around don't forget under the folded area of the gasket and leave the door open an inch or two. Do not put anything between the door and gasket to keep it open, it will deform the gasket over time and you will get leaks. Mold can be prevented with a bit of effort. As far as detergent, the service tech said no more than 2 table spoons for normal loads and 3 for very soiled loads. I use HE Arm and Hammer and have excellent results. Purchased it over 2 yrs ago and it seems to be still in good condition. I was under the impression that you could do an extra large bath size towel load about 10 towels but according to the technician you can wash maybe 5-6 of them for it to spin and balance correctly. Excellent tumbling action which is gentle on your clothes. As for the comforter cycle you can wash up to a queen size one. It does use minimal water and gets the clothes cleaner than any top

loader.

Overall all its a decent washer. Get a rebate Have now had it for a few months and used every cycle many times. Even the quality of the hose attachments is far better than the standard hookup hoses. My last washer was a Kenmore that lasted less then a year before it self destructed and left tranmission oil all over the tile floor. I purchased the BOSCH dryer at the same time and it dries clothes quickly. I plan on buying the Bosch dishwasher next. In the showroom it looked good with all the chrome and felt solid. However this washer had problems from the start. When in warm wash mode water leaked out of the detergent drawer. Service personnel made adjustments on plastic in the drawer and leak stopped but only when no detergent was placed in drawer. Four months later a leak developed at the bottom right of the washer. Also the door would not unlock at the end of the wash cycle. Service personnel were called again and ordered replacement parts for the detergent drawer, mechanical lock and drain pump, all this in less than six months use with a family of three. We are absolutely thrilled with the products. I was hesitant to purchase a brand I was unfamiliar with and hesitant to purchase a front loading washer primarilly due to mold and mildew concerns. The washer and dryer are far quieter than anything I have seen or heard before. I had read reviews about them being quiet but they were understated. THESE APPLIANCES ARE QUIET!!! Although the washer takes a bit longer for a full cycle than I am used to, it is doing an excellent job cleaning clothes and is doing so with less detergent and water. The dryer is the fastest I have experienced. There is less lint than we have ever seen probably due to a gentler cleaning than ever. Oh, did I mention, the washer and dryer are so QUIET. I love them!!!

The only negatives are the cost a bit pricy but comparable to others in the same class; the access door height I did not purchase the optional cabinets for under the units which means a bit more bending than I am used to; and the fact that the washer door is not reversibile it opens to the left and that is that. The dryer door is reversibile. I would highly recommend this to anyone based on 6 weeks of experience and a lot of laundry. I was skeptical at first because it was so different than my top loader, but now I love it. Its easy to do. How Simply click here to return to Bosch Washing Machine Consumer Reports.
