question Answers Best answer The Bose Cinemate 1SR's soundbar is designed to be hooked up directly to the TV's audio output. All of your sources, such as a Direct TV box or DVD player, would be connected to the TV itself.<http://www.czx318.com/upfile/15996596321299476336.xml>

By doing this, the TV handles the switching of sources and the audio will follow automatically. Thank you for the question. Our TV sound is poor. Especially when people talk in a movie. We have to turn the volume on the TV up so high we often get the background sounds music, special effects so loud they cause the speakers to crackle. Is there a way with this sound bar to increase the volume of the speaking parts without greatly increase the volume of everything else 2 Answers By Dutch 7 years ago Helpful 0 Unhelpful 0 Report Sorry, there was a problem. Answer this question Answers Best answer The Cinemate 1SR System should be able enhance the overall quality and clarity of your TV audio, including the dialogue. However, there is no separate control specifically for adjusting the volume of speech. Difficulty making out speech from the surrounding music and special effects can also be due to incorrect settings in your TV or cable box. If you still experience this problem upon setup of the Cinemate, our product support group should be able to help you resolve it over the phone. They can be contacted at 18003804831; hours are 830AM1000PM MF, Sat 9700 EST. Thank you! By Bose 7 years ago Helpful 2 Unhelpful 0 Report Sorry, there was a problem. Show more answers Question Q Mounting Soundbar so all cables are placed behind wall.Thank you 2 Answers By Anonymous 8 years ago Helpful 2 Unhelpful 0 Report Sorry, there was a problem. Answer this question Answers Best answer Theoretically, that should be all you need. However, I would suggest also having analog stereo audio cables 2 cables and perhaps also a coaxial digital audio cable 1 cable available too just in case you have a problem with the optical digital audio cable.

At the very least, be sure your optical cable works satisfactorily before you close in the space for the cables with drywall. Show more answers Question Q Is this considered a 1.1, 2.1, or 3.1 system, or something else 2 Answers By Anonymous 6 years ago Helpful 0 Unhelpful 0 Report Sorry, there was a problem. Answer this question Answers Best answer Thank you for your question. The CineMate 1 SR is considered a 1.1 home theater system as it includes one soundbar speaker and a wireless bass module. We hope this helps! By Bose 6 years ago Helpful 2 Unhelpful 0 Report Sorry, there was a problem. Show more answers Question Q Is the 1SR Compatible with the Samsung LN46D630 tv. Thanks 2 Answers By Rob 7 years ago Helpful 0 Unhelpful 0 Report Sorry, there was a problem. Answer this question Answers Best answer Since this model of Samsung TV features an optical audio output on it, it would be compatible with our CineMate 1SR speaker system. Show more answers Question Q Are soundbars good for large rooms 2 Answers By Anonymous 7 years ago Helpful 0 Unhelpful 0 Report Sorry, there was a problem. Answer this question Answers Best answer Thanks for your question. The CineMate 1 SR Speaker System will certainly work well in a large room. Though the system uses side walls as reflective surfaces for sound, running the included ADAPTiQ audio calibration will help to optimize the system in a larger room. The ADAPTiQ audio calibration software automatically tests the acoustics of the listening area, analyzes speaker placement and tailors the sound of the system to the specific acoustics of the room. We hope this helps! By Bose 7 years ago Helpful 2 Unhelpful 0 Report Sorry, there was a problem.

Sorry, there was a problem. Answer this question Answers Best answer Thanks for your inquiry. Your Harmony remote control along with any "learning" remote control can be programmed to control the Bose CineMate 1SR Speaker System. If you have any further questions, feel free to contact our technical support team who will be happy to assist. They can be reached at 18003804831 and are available 830am 1000pm MF, 900am 700pm Sat EST. Show more answers Question Q Can the speaker be mounted over the TV. 2 Answers By Anonymous 8 years ago Helpful 1 Unhelpful 0 Report Sorry, there was a problem. Answer this question Answers Best answer ideal placement of the speaker is in front of your TV, at or near earlevel, and facing into the room. Because every installation may be somewhat different, the AdaptIQ feature built into the system will calibrate your speaker placement to ensure you get the possible performance. We hope that helps! Can my sound bar will work without connecting subwoofer. 4 Answers By Ash 6 years ago Helpful 0 Unhelpful 0 Report Sorry, there was a problem. Answer this question Answers Best answer This system will not work correctly without the Acoustimass bass module attached. However there is a bass knob on the back of that module to allow you to increase or decrease the amount of lowfrequency output from the system. Thanks for the question. Wondering what would be the best setup to achieve the best simulated surround sound. It would be difficult to connect to sources directly since there is only 1 optical connection. 2 Answers By Anonymous 8 years ago Helpful 1 Unhelpful 0 Report Sorry, there was a problem. Answer this question Answers Best answer A direct connection to the source will often ensure that your system gets the best quality input. However, only some TV's will degrade the sound quality by adjusting the signal to a 2channel format. Often the digital audio output setting can be adjusted in the menu of your TV. Contact your TV manufacturer for more information on how it handles digital audio. If you need further setup help, please contact service. I use this in my kids TV room, and their DVDs and Netflix always sound astoundingly good. The bass module houses three power amplifiers and the magic DSP that reproduces 5.1 sound from the two small speakers. The TOSLINK input decodes 5.1 if you want. The CineMate system sounds fantastic for cinema, with exceptional dialog clarity, enveloping spatial sound and strong, clean bass. You can spend a lot more and get a lot less! It sets up in seconds. Plug the woofer into the wall, plug the remote receiver cord into the woofer and place the receiver under your TV.

<http://cqitracker.com/images/captiva-instruction-manual.pdf>

Put each main speaker on a shelf on either side of your screen, and plug the speaker wires into the back of the woofer. Plug either a stereo RCA cord or a TOSLINK cable from your TV or player into the back of the remote receiver, and youre done. I dont bother. It has the tiny remote control. As expected, the CineMate II system is voiced perfectly for cinema. Voices are extremely clear, making it easy to hear subtle nuances in dialog. Rearpanned sound doesnt usually go behind you, but its still far better than any sound bar Ive heard. Its voiced like many cinema venues. It plays superloud and has great bass, but its not great for HiFi eyesclosed careful music listening. It has some distortion

audible in much of the range on pure tones, possibly added deliberately as part of the efforts to clarify dialog, and the voicing isn't great for serious music — but if you're having a party, it runs circles around any iPod dock. It covers the complete traditional music range evenly. Bass notes are wonderfully distinct, each with its own pitch and they sound staccato detached and separate if played staccato. This is much better than many other home subwoofers that just boom the same note all the time due to too much resonance. I pop the speakers close to the side walls, far away from my screen, for the widest sound. Bose suggests not letting them get too far away from your screen. In any case, leave the speakers pointed straight ahead, don't point them towards the center of the room. Bose intends for the sound to bounce all over. The CineMate automatically selects whichever you're using either the stereo RCA inputs or the TOSLINK connector. Bose is generous, but you will need to provide your own TOSLINK cable if you use one. To switch among different sources, feed your CineMate from your TV or other device that selects what you're watching. If this source also controls the volume, you could turn up the volume with the CineMate remote and then use only your main remote.

Therefore you always have to use the Bose remote control to set the volume or turn it on or off, meaning you now have one more remote control to have to find just to change the volume. Therefore, I prefer the tiny remote that I can understand. I don't know about you, but I don't have a weekend to spend stringing wires, bolting speakers to the wall and screwing around with a hundred idiotic menu options on a receiver just to get it to sound right. I just plugged in our CineMate, and it sounds great! The CineMate is ideal for just install and enjoying big sound immediately. The CineMate is simple and straight forward to setup. As with any system, location of the speakers is important. Locate the small front speakers to the sides of the TV screen, the subwoofer placement is not critical more later, but because the amplifier and audio connections are located in the subwoofer, it must be placed fairly close to the TV unless you use longer cables from the audio out of the TV and then you are still limited by the length of the speaker cables which have custom connectors molded on. The front speakers provide sharp, accurate sound, the bass is good without being over powering.

No, you arent going to feel the bass in your gut, but then this system was never intended to do so. Several reviewers were disappointed with the bass response; even though subs are nondirectional, their output can be influenced by several factors within the listening area. Try turning the sub unit, sliding it further way from a wall or closer to it.It was supereasy to set up, too. The hardest part was just getting it out of the box and that was easy!. Anyway, the sound quality is nice and a huge jump from the regular TV soundwhich its a DLP and the sound is okay, but this just gives it a much nicer quality. Also, for the price you cant beat it, considering its a Bose. We also have the 7speaker system and although the sound is better on that, youre not paying a few grande for this set. I totally recommend this for those who dont have the money to chunk down on a bigger set, or for those like us who dont have a good floorplan for running surround sound in this room.There are plenty of good reviews already, I just wanted to highlight 2 things 1 if you use a Samsung BDP2500 1080p Bluray Disc Player or, presumably, any Samsung Bluray player the universal remote pause button does not function. 2 ignore the folks who say that, since this isnt driven by your digital output, this is not a worthwhile system.I have a Bose 321, in ear headphones, radio, speakers in my SUV and just recently the Cinemate system. The Bose Cinemate theater speaker system is a must have if you want to upgrade the sound of your TV,DVD and or VCR output. There is ease of setup and operation with sound worthy of comfort in any small room. I have mine hooked up in my bedroom. I have not heard complaints from my neighbors as yet, but Ive noticed that my wife has begun to crank up the volume as well. Once the system is set up there is nothing to do but to turn it on and off as desired.

The television speakers are turned off during setup, so your equalizer settings of your TV provide the desired Bass and treble. I have had to reduce the base and volume settings while listening to some CDs, but other than that I just turn it on as needed. An interesting feature is the universal nature of the remote when correctly setup. One can control other devices with the Cinemate remote. Pick one up and be prepared for a pretty lively room. I realize in many ways this is poor praise for such an excellent system which is a supplement to a TV speaker. So this system is a blessing. I did not seek exceptional reproduction of TV but to listen normally and not miss the blurred sounds. It does the job. Bose is a great telephone information and help company. They actually hold your telephonic hand. AWESOME, ACCURATE, sound !! All I can say about those that are giving this a negative rating is that they must NOT be able to follow directions or have a lame set up to begin with. If you want great accurate sound this is for you. The Bose acustimass simply kicks ass when called upon. I should have read the specs more carefully. Had a difficult time setting it up. Had to purchase a converter box converts analog RCA cables to optical cable. Box worked fine. I wish the woofer provided more base. The ADAPTiQ audio calibration system analyzes the dimensions of your room, along with other variables that affect sound. It then automatically adjusts the sound of the speaker system to match the acoustics of your room for the best possible audio experience. The system also features Flexmount placement compensation, which automatically detects the orientation of the speaker and adjusts the sound so you achieve the best results whether you mount the soundbar on a wall or place it flat on a table or TV stand.

The CineMate 1 SR has a SmartSource input selection system, which continuously monitors the auxiliary audio inputs and automatically switches to the best signal available that matches the video signal on your TV. The system also comes with a programmable IR remote, which can be used to control devices such as TVs, Bluray players, and more. To fix this, remove the Bose soundbar wires from the television and run speaker wires to the cable box. If this is the case, go into the television's settings and switch the audio from Dolby Digital to a PCM Pulse Code Modulation audio setting. Try hardwiring the subwoofer directly to the system using a cable. Use a vacuum cleaner, preferably with a soft bristle attachment to clean dust or fibers from the cloth speaker grill. If it doesn't clean, try using a lint roller. If dirt has caused too much damage, replacement might be needed. Use a vacuum cleaner, preferably with a soft bristle attachment to clean dust or fibers from the cloth speaker grill. If it doesn't clean try using a lint roller. If dirt has caused too much damage, replacement might be needed. Use the source or input button on the television or TV remote to select appropriate source on your television. To reconnect wires, unplug all wires associated with the system and reconnect them.

To perform a reset, you must unplug the power cord for at least 5 minutes, then plug the power cord back in. If there is no startup tone within 10 seconds of giving power to the system, then the power outlet may not be working. In this case, you could try moving it to a different power outlet. You will know when your system is powered on if there is a solid green light at the front of the system. This can be resolved by connecting the power cords more tightly. Unplug all cords connecting the device to the television or other system being used. When plugging the cords back in make sure they are fully inserted into the outlets. Double check to see if the remote can be used on other devices. If it appears to not work replace the batteries and check again. If the remote continues to not work even with replaced batteries, the remote needs to be replaced. To properly reset the system, make sure the product is turned off. Then unplug the device from its power source and wait for 1 minute. Reconnect all of the cords and test the system. This can happen if you have Bluetooth turned off or your device is in low power or airplane mode. To turn Bluetooth on, go to the settings menu of the device you are attempting to pair with the Bose Cinemate 10, find Bluetooth settings, and ensure that your Bluetooth is turned on. To fix this problem, go to your settings menu on the device you are attempting to pair with the Cinemate 10. Next, locate the Bluetooth settings menu and ensure that your device is in discoverable mode. After this feature is enabled, the Bose Cinemate 10 should appear on a list of connectable devices. Go to your devices settings menu, and look for "General Settings," look to see if there is a software update available for your device. Click "download and install" to begin update. This may take several minutes to update, and your device will likely restart. After update is completed, go back to your devices settings menu and locate the Bluetooth settings menu.
