Page 2 INTRODUCTION Congratulations on the purchase of your Breville BRITA Aqua Fountain chiller. Fill with cold tap water up to the MAX FILL LEVEL mark on the upper water tank and allow the water to filter through. 1. Remove the cartridge from its wrapping it is normal for the cartridge to appear moist during storage this is simply condensation. 2. Immerse the cartridge in cold water and agitate gently to remove any air bubbles. Maximum fill level mark. NOTE There is no need to presoak this cartridge before use. The switch will illuminate and the machine will begin to chill the water. 1. Lift the hinged lid and using a suitable jug, carefully pour water into the tank up to the MAX FILL LEVEL. It is possible to use the unit without power but the water will not be chilled. Remember that water is a foodstuff. Please consume filtered water within 2 days. NOTE There is a risk of leakage from the split joint between the top tank and filtered water tank. Page 8 USING THE BRITA MEMO FUNCTION It is important to change your BRITA water filter cartridge regularly to enjoy the benefits of BRITA filtered water. The Memo is now set. Replace the drain plug. Cleaning The outer casing of your water filter chiller can be cleaned using a soft damp cloth and a nonabrasive cleaner. It is important that the inside of the chiller is cleaned regularly. Page 11 IMPORTANT SAFETY INSTRUCTIONS. Never use this appliance outdoors. Never use this appliance for other than the intended use. This appliance is for household use only. Never immerse any part of the appliance, cordset or plug in water or any other liquid to protect against electrical hazards. Never use harsh, abrasive or caustic cleaners to clean this appliance. Never let

the cable hang over the edge of the worktop, touch hot surfaces or become knotted. <http://anbao.vn/uploads/userfiles/ctek-m100-user-manual.xml>

Page 12 CONNECTION TO THE MAINS SUPPLY When using electrical appliances, basic safety precautions should always be followed. ! WARNING THIS APPLIANCE MUST BE EARTHED If this appliance is fitted with a rewirable BS1363, 13 amp plug, the fuse should be rated at 3 amps and be ASTA approved to BS1362. However if the plug is unsuitable, it should be dismantled and removed from the supply cord and an appropriate plug fitted as detailed below. Page 13 AFTER SALES SERVICE These appliances are built to the very highest of standards. There are no userserviceable parts. Follow these steps if the unit fails to operate 1 Check instructions have been followed correctly. 2 Check fuse has not blown. 3 Check mains supply is functional. If the appliance will still not operate, return the appliance to the place it was purchased for a replacement. To return the appliance to the Customer Service Department, follow the steps below 1. Page 14 GUARANTEE This product is guaranteed for a period of 1 year from the date of purchase against mechanical and electrical defects. This guarantee is only valid if the appliance is used solely for domestic purposes in accordance with the instructions provided, that it is not connected to an unsuitable electricity supply, dismantled or interfered with in any way or damaged through misuse. Under this guarantee we undertake to repair or replace free of charge any parts found to be defective. Page 15 RECYCLING INFORMATION The Maxtra cartridge in the chiller is 100% recyclable. Look out for BRITA recycling points in major retailers or visit www.brita.co.uk for more information. The UK public alone dispose of over 1.2 million tonnes of electrical and electronic waste every year; this would fill the new Wembley Stadium 6 times over.

Page 16 RECYCLING INFORMATION The Crossed out Wheeled Bin Symbol All new electrical and electronic equipment should be marked with the crossed out wheeled bin, which aims to encourage you to separate out WEEE from other household waste and to dispose of it at a recycling facility. It was a good cooler, but was reasonably tacky just slightly cheaper than my new Breville Aqua Fountain. The new cooler set me back 55 from Robert Dias. First impressions were good. It's got blue LEDs which make the water chamber glow, and has a downward pointing LED highlighting the dispensing area. The unit needs cleaning before use, but that should be obvious to most. Having said all this, I have a few issues with this cooler. They really do give the cooler a nice look, but I don't actually want them on. They are bright, and I keep this on my lounge, so whilst watching a movie I have to turn it off. To demonstrate how bright the lighting is, click the image on the right. This was taken about midnight from outside my house, nothing is on except the water cooler in that room! My old cooler was very loud when it was actively cooling, but it didn't do it very often. This cooler seems to spend a lot of time attempting to cool. Various quotes on the internet suggest this unit should cool to between 5 and 10 degrees. I'm reasonably confident it's not cooling that much, but I intend to get a thermometer to test it soon, and will update this page when I do. I took a glass of about medium size, I imagine about 250-300ml and filled it with water. I then took the temperature of the surface of the water. I ensured that the blue light on the front of the cooler was on, which signifies that water is at temperature. The reading was 10 degrees, so within specification, but only just. As the Brita Breville Aqua Fountain is a joint venture between ourselves and our partners Breville, we are keen to consult with Breville fully before responding to yourself.

<https://www.thebiketube.com/acros-bosch-motion-detector-manual>

We look forward to coming back to you within the next week. As with all products, consumer feedback is vital to their continual evolution, improvement and ultimately customer satisfaction and as such we welcome your honest opinion. Most are happy with the cooling performance, the convenience and cost over bottled water that it offers. I understand that it is only natural that those who have had an unusual or unfortunate experience are more likely to post opinions than those who are content. For those that are disappointed with the performance of their Aqua Fountain, it is

guaranteed for a period of 1 year from purchase date against mechanical and electrical defects. Also, whilst I appreciate that the water temperature achieved you mentioned that you measured it at 10 degrees, its correct specification might not be cold enough for your own tastes, we feel sure that this is ideal for others. We pride ourselves in offering good customer service and genuinely welcome customer feedback as it forms part of our product development programme. If you have any other queries, please feel free to come back to our customer care team. My dealings with customer services on this issue were good. Other than the delay in reply from Breville, replies were pretty quick. I bought one of these coolers in a lovely silver colour and paid an extra 20 for doing so. It was supposed to take 3 hours to cool but i had to leave it overnight and even then the water was not very cold. Needless to say, I will no be buying one of these. I am grateful that you have helped me save the money. My main criticisms are the temperature of the water dispensed cool but not cold, the noise of the fan, and the time it takes to do what little cooling it does. I wonder how it does the cooling. I cannot think it is the same technology as a fridge. It is certainly not comparable to an office cooler for effectiveness. A severe disappointment.

<http://elipseradiologidigital.com/images/comedy-improvisation-manual.pdf>

I have been totally sucked in by all the marketing on the Breville water coolers and was just about to click the button to purchase one from the Amazon website.that is, until I found your review and you've saved me not only the 67.00, but more importantly, the potential earache from my husband for buying yet another not so clever gadget. Thank you for that, to you I am eternally grateful. Perhaps not. Thanks again. What a waste of money. I paid 100. when they first came out. Don't know what to do with it now. Think it maybe better to get a table top bottle cooler instead I am extremely dissatisfied with it. Perhaps Robert Dyas should consider some form of compensation As others have already mentioned, it hardly chills the water, and then you are usually limited to one standard sized glass of water. In the summer, the unit does not even reach ten degrees. I contacted Breville who informed me that I could return it for inspection, but I would have to pay for postage charges in both directions if the unit was found to be OK. I would not recommend this product. Does anyone know of a countertop cooler that cools as you dispense, rather than cooling a whole litre of water Thanks It's going straight back after trying to cool the water for the last 24hrs without reaching it's cut off point. Was going to replace my EBAC Water Eddy because I need a new water trail and thought I'd update it although I only bought it last year 2nd one, the other one was white and I wanted silver!!, so I've save my money on not buying the Brita Aqua Fountain. We live permanently in Spain now and it was bought for that. The bright light is immense and we don't have to have any light on at night, and the cooler does not cool except in winter time. The other thing we found was that the water at many times would only trickle out, so filling a glass with water was a long time happening.

<https://elitesoftsolutions.com/images/comedy-improvisation-manual-ucb.pdf>

However due to your farsightedness, I have read your comments, but more important all the other comments, and without a single good word I will save my money. Wish we had seen this before wasting 99 on a product that never cooled properly and only seems to have a life of just over a year. Soon after the first week we noticed a tainted mouldy smell from the upper reservoir, although the water still tasted OK. I put a thermometer in there and it measured 82F. Room temp is about 72F. The water in the reservoir is getting heated by waste heat from the cooler unit below it It worked ! the water was much colder and then unit cut out when cooled. But guess what after two months it didn't cut out, the temp light never came back on and the water was back to 10c. Looks like it's back to the tap. Finding suppliers for the parts impossible. I repaired one unit by disassembling the fan and lubricating and soldering a new fuse on the board This developed after a year. The water was never cold enough. Very disappointed. My Aqua Fountain has broken down, yet again Argos replaced it 6 months ago. Argos not interested because they don't stock them any more surprise.

Having spent hours holding on for the next available operator at Pulse Home Products in Oldham I am now at a loss as to what to do. Probably throw it out and go back to the jug! Luckily I have just found a supplier on ebay and got 2 filters for 4.00. Maybe i've just been lucky with mine as everyone else doesn't seem too happy. It's plastic, and is noisy when it's cooling. It might not look so good, but it's a fantastic unit. I wish I had brought another Hinari rather than this Brita thing. The first cost 100 from Argos silver model. It died after around six months. The next one cost 66.66 from Argos, it stopped chilling and then a couple of weeks later stopped dispensing water. That was after 10 months. If this one packs in I'm going to get a proper mini fridge and a Brita water filter jug! When they work.

Trouble is that the fan is always on but I keep it in the spare room, and the blue lights can't be turned off. I find the water temperature fine though. The front blue LED packed up after about 4 months, and now the motor has just died. I was going to buy another one, but glad I found this site and saved myself a lot of money! The first one I had permanently cooled from the minute I turned it on, it's replacement has developed a leak after 2 days, and why on earth does it need to be so noisy. Off to Robert Dias for a refund methinks. I keep replacing it because when it is working it is so convenient and everyone drinks more water which they wouldn't if they had to get a bottle out of the fridge. I did get my money back from Costco the 1st two times but I couldn't find the receipt the last time. Incidentally Costco seem to have stopped stocking it probably because they had to give the money back so many times! Prior to that the motor seemed to be on an awful lot and after an initial 2 months seemed to have problem getting the water down to the desire level. Again, like previous comments the reservoir seems to be getting warm from waster heat from the water cooler, which I guess must be a design problem. Not worth the money, like others it shows you need to keep the receipt! I was considering this instead of the breville one but don't want to be out of the fire and into the frying pan I didn't know if we were unlucky or this was typical of the product, after reading the reviews I took it back and received a refund. Absolute crap!!! The blue temperature light failed after just one year. It then started getting very noisy and I never felt the water was chilled enough. Now the thing is just dead not chilling water at all. One of the blue lights has gone out and another is just slightly flickering. Was so used to the noisy fan that I now feel there is something missing in the kitchen! Getting a crappy one and a bit years out of it sucks!!

casheroregon.com/wp-content/plugins/formcraft/file-upload/server/content/files/162726c5872e07--bremshey-treadline-trail-folding-treadmill-manual.pdf

I don't even know if it's worth repairing. Anyone tried having their's repaired. I think it should have a 2 year guarantee. Bought it from Next and feel I've been robbed of 90 quid!! Wish I'd seen this site before I bought it. Oh well, at least I know to check out sites like this one before I consider buying other goods. So its back to Comet again. Can anyone suggest a decent alternative that actually cool water I noticed my machine has stopped chilling the water which now comes out lukewarm. Funny how this always seems to happen just after the 1 year warranty has expired. Have had rather upset stomach for the last 2 weeks nothing major but feeling a bit queasy. Now fairly sure I know why so to any potential purchasers AVOID! The guarantee has expired and it's stopped working. My blue light is out too and the machine is running all the time. Water nice and cold though. Very disappointed and shan't even bother trying to find the instructions in light of others' comments. Then the blue "water cooled" lamp went out although the water still seemed to be cooling and now, just 3 months outside the guarantee, the entire unit has packed up. The fan was always quite noisy but towards the end of January 2008 started to sound like a jumbo jet. I was looking on the internet for a replacement when I came across this blog and have now changed my mind. I will buy an ordinary water filter and just use ice cubes!! Thanks to all who have bothered to write for this blog and who, together, have saved me from squandering my money on a new one. That's three units in less than two years. They are rubbish. I love what they do, but they don't last. Not as convenient as a worktop

unit which takes up valuable space, but other than the tap to dispense water, there nothing to go wrong. Nothing electrical anyway. Came to reuse after it was reinstalled and found the water being dispensed murky. Have checked the filter cartridge which was quite new, no fault. Litres and litres later more of the same.

How healthy is this. Yes the light and motor noise are a problem. After 2 months it stopped chilling but luckily the seller had provided us with the original Argos receipt. Off we go to our local Store and making out it was a wedding present, we obtained a brand new replacement. Handy we thought!!! 12 months and 2 weeks later i kid you not the motor starts sounding like a helicopter taking off and 2 of the LED lights have packed up. We contact Argos and basically, its not there problem. What a waste of money. I agree with what has been stated over the many previous posts. My main issues are the same brightness of the leds, fan noise and the coolness of the water. I am very disappointed with this product. This gives you access to remove the left hand circuit board and the dispensing assembly. Then cut the cable ties securing the two water ducts and release the molex connector that supplies the LED circuitry to the dispensing module. Unclip the plastic chassis you'll notice it is a twopart affair. The fan is prone to seizing which blows the fuse. I'm sure all of the members of this forum have heard their units struggle before giving up and this has to be a clue. Sure, the makers should have known the problems of the unit's probable siting, but all the same, when I saw my unit's sticky fan covered in sticky dust, I realised that the environment was the problem rather than Breville's design. Cheers Lucy xx I purchased this model too, it never reaches full cool as the front light does not illuminate, the water is certainly not cold by any means. No it never switches off, fan on 24 hrs day. Waste of money Mine still lights up but does not cool. I spoke to manufactures customer services. I explained that the Aqua fountain was not fit for purpose and the only reason they sold so many is because they look good. That said, does anyone know of a good alternative, or is the jug the only decent method.

I didnt know where the appropriate health and safety regs are but we are lucky this didnt poison us. Dont buy one. I didnt know where the appropriate health and safety regs are but we are lucky this didnt poison us. My parents have had two of these units and both have failed. I just assumed they were very unlucky and was convinced that mine would be fine. Famous last words. Although I've never been entirely satisfied with how cold the water actually comes out of the Aqua Fountain, last weekend the water seemed to be coming out much warmer than usual and I notice the blue light on the front now doesn't come on at all anymore. The fan still runs so I can only guess that the thermostat is dead In the five months they've had the Russell Hobbs unit there have been no issues with it at all. My Brita unit is thankfully still under warranty so it will be going back to Robert Dyas this weekend and I will be opting for one of the Russell Hobbs units instead. I'm sure Mr Dyas is going to be overjoyed at seeing yet another one of the Brita units returned. After all the returns they already seem to have had, I'm actually quite surprised to see they're still selling them That way you don't ever need to top up a half full jug and therefore making it warm again. Also, the more content in your fridge, the less it costs to run My first one did pack in but Amazon replaced it without any hassle and the one I have now is perfect. The motor seems to run virtually continuously and the temperature of the water delivered seems little different from normal tap water. My daughter has had two of these replaced under guarantee and finally this evening our own fountain of around 18 months of age has given up the ghost and died. The one consolation is that it still looks good and the blue lights illuminating the no longer chilled water are still on. It may well substitute as a very attractive and avant garde goldfish bowl.

Thanks again, Liz The noise of it was really annoying so I have unplugged it and put it in the shed until I am fed up with looking at it and take it to the dump. Just to add our experiences. Will NOT be exchanging it this time. I find the cooling almost constant which cannot be good for saving energy so it's back to the filtered water in bottles in the fridge from now on. Thank you for your review.

Unfortunately the one year guarantee has now run out. I wish I had taken it back to begin with. But I am obviously not the only one! That is an impressive 1 every 14 weeks. To date, I have had 6 motors die, 1 completely Dead On Arrival and my latest which I had to pay for yet again has ceased to dispense any water after 19 hours of use. This is the WORST product I have ever bought in my entire life and I would highly recommend anyone considering a purchase NOT TO !!. It was almost two months out of warranty when I contacted Breville customer service. They could not have been more helpful. After I supplied them with the date code of manufacture along with my original purchase receipt, they asked me to box up the unit which was picked up by Citylink couriers and then approx 1 week later, a brand spanking new model turned up on my doorstep. So, even if yours is slightly out of warranty, it's still worth contacting Breville Customer service. I would have loved a fridge which dispenses cold water and ice, but no room. Sometimes even if I open the valve at the bottom nothing comes out. We're about to send it back. We do find it noisy as well. We have had Motor failure, frozen up, lights go, mildew in the spout and not it's not in the sun, it's not even by a window. The latest one is freezing up, as though the thermostat is not stopping the motor. People are paying good money for these and they are breaking.

I know, glutton for punishment and all that, but since I knew that they always fail at about the 12 month mark, I was smart I thought and bought the 3 year replacement cover at Argos. However, when it failed as expected, they point blank refused to replace it. It's now shown in their catalogue under a different part number, although it looks identical to me, so they can get round honouring their warranty by claiming it's a different model. I really think someone should report Brita to watchdog for this product, there's an awful lot of unhappy owners. I tried once, but never got a reply. Problems have ranged from unchilled water to a noise like a motor bike in the kitchen. Firstly he tells us his photo was taken at midnight of the lounge window of his house. Looks like first floor window above a shop facade to me and if it is, why is the street lamp out. Does he continually stand outside his lounge overnight just to make such a trivial moan. I should cocoa! He's trying to impress everyone that he's a perfectionist, yet a four year old child could've taken a sharper and better balanced photo than HE has. So far then, a load of cobblers! Now ANYone who knows about the military, will tell you that a lighted cigarette can be spotted nearly a quarter of a mile away on a clear night and the face of a luminous watch can be seen 350 yards away. An led watch will actually light up it's viewer's face enough for a sniper to take him out at 500yds. Useless information. No, just illustrating how very little light can illuminate it's surroundings in complete darkness. So far then we have been treated to the ramblings of a Walter Mitty. This guy would not buy ANYTHING without griping. I have written for the thousands of people who are happy with their coolers but cannot be assed to respond to the pedantic time wasting rhetoric of a man who is so far up his own end, without anything to enrich his safe and boring existence, that he lives in a cocoon away from everyday reality.

TO such person I say GET A LIFE The number of comments left agreeing with various aspects, and people's comments about it's reliability which I have never commented on do seem to suggest that the product isn't that great. What I do know is that I paid good money to replace a cheaper water cooler that broke, and was dissatisfied with what I got. Sorry you feel the need to be childish, over reactive and hostile in your comment. And despite ET's success and fondness for the device, any kind of simple search on the web turns up far too many negative comments to believe that we, who've commented here about our problems, are only a handful in number. Like a mug for the first time I impulse bought, spending 60 on this thing about 2 months ago. Placed it in the upstairs landing, away from all the heat in the kitchen. It broke down first about 2 weeks ago but I gave it a good tap, unplugged it and plugged it in again and it started working again. Now the blue temperature LED has gone out and the motor no longer runs, again. Tried the original solution again, but no cigar. It just suddenly stopped. It is designed to blow at 94deg C. Please replace it with the correct one. The first one leaked all the time so we took it back recieved a replacement that now

drips from the spout all the time so we have to put a glass underneath to stop it overflowing. As we are now outside our 1 year warranty we can do nothing about it we have asked. As with most other people here our temperature doesn't get low enough. They refunded my money immediately as they didn't stock them any longer due to the amount of returns they had received. Great bit of customer service. You may often find they break in a few months, have a plastic taste to the water, are hard to sanitise. I've bought a good few in the past from various manufacturers on eBay etc. None were any good. Proper water coolers cost proper money. Anyhow having dismantled this The problem is as described in Andrews post.

Being a mechanical engineer I can see many flaws in this simple design. So these are the following modifications I am going to make. I am going to try replacing the thermal fuse with a thermal fuse with self restart, I am going to machine out the back of the heat sink and insert a copper core, I have ordered a fan with a higher CFM and lower wattage. The vents on the back I am going to machine them 1mm wider, I am also going to look at the possibility of placing a small fan or improving the heatsink on the main power board in the top of the unit, I will of course let you know how I get on. Was given a new one which I brought home filled with water and it leaked all over. Tomorrow I have to take that back and I will be asking for my money back, I am now left with another 4 Maxtra that we bought WET FLOORS CAN INJURE sent it back cost 10 only to have it replaced with another leaking spout. I guess the saying is correct A FOOL AND HIS MONEY ARE SOON PARTED. Sadly that is where the plus points will end. The water takes ages to filter through, the blue light cannot be turned off and is very bright, the water dispenses ridiculously slowly, larger glasses are difficult to fit under the filling section and the filters are expensive. I used to buy bottled spring water from Lidl which are very cheap and just as cold if left in the fridge. I would have another but Breville and Brita need to get their heads together to sort the teething problems first. I purchased mine from Argos in Jan 2009 and was more than pleased for about a month. Then it failed to cool the water and the motor ran continually. I took it back to Argos this morning and was told they do not stock it any more and got a full cash refund, which is unusual for Argos after 8 months. You can take them to court using the sale of goods act. The item doesn't have to just last the warranty period. It should last a reasonable amount of time. Well worth the call.
