Elija su idioma en la lista anterior y todo el contenido que este disponible en su idioma aparecera automaticamente en ese idioma, o, si no, en el idioma predeterminado que es el ingles. Une partie du contenu comme les descriptions de produit, les lancements recents de produit et certains articles techniques est egalement publie en allemand, en espagnol, en francais, en italien et en neerlandais. Choisissez la langue dans la liste cidessus, et tout le contenu offert dans votre langue s'affiche automatiquement; par default, le reste s'affiche en anglais. Alcuni contenuti come descrizioni di prodotto, lanci di prodotti recenti e alcuni articoli tecnici sono disponibili anche in tedesco, spagnolo, francese, italiano e olandese. Seleziona la lingua dall'elenco in alto e automaticamente si visualizzeranno tutti i contenuti disponibili in quella lingua; diversamente la lingua di default sara l'inglese. Bepaalde inhoud, zoals productbeschrijvingen, onlangs gelanceerde producten en sommige technische artikelen, zijn ook beschikbaar in het Duits, Spaans, Frans, Italiaans en Nederlands. Kies de taal uit bovenstaande lijst, waarna alle inhoud die beschikbaar is in de gewenste taal, automatisch in die taal wordt weergegeven. Anders is Engels de standaardtaal. These EXseries Speedlites are also compatible with TTL flash metering, so will operate with all EOS models. This means that EZseries Speedlites can only be used in manual mode with EOS digital cameras. ETTL II is a camera feature, not a Speedlite feature, though it only operates with EXseries Speedlites. These models allow the viewfinder sensors to be used for both ambient and flash readings. These cameras, called Type A, include the EOS 1V, 3, 30, 30V, 33, 33V, 300, 300V, 300X, 3000N, 3000V, 50E, 50, 500N, IX, IX7 and all EOS digital cameras. Type A film cameras also include sensors that can read flash illumination off the film during an exposure, so EZseries Speedlites can be used with ATTL autoexposure. <http://barexkft.hu/userfiles/dvdr3400-37-manual.xml>

These include the EOS 30V, 33V, 300X, 1D Mark II, 1D Mark II N, 1D Mark III, 1Ds Mark III, 5D, 5D Mark II, 20D, 20Da, 30D, 40D, 50D, 350D, 400D, 450D and 1000D. Light is reflected down to the sensors by a secondary mirror hinged behind the main reflex mirror. The centre of the reflex mirror is semisilvered, allowing light through to the secondary mirror. This allows ATTL metering with EZseries Speedlites and TTL metering with EXseries Speedlites. These sensors operate with EXseries Speedlites. The cameras also have flash sensors in the bottom of the camera body for ATTL metering with EZseries Speedlites. They only have sensors in the viewfinder area, so can only be used with EXseries Speedlites. It could do this by altering the power of the flash, increasing or decreasing the brightness as you change the distance of the camera from the subject. But this does not happen. Instead, Speedlites increase or decrease the duration of the flash as the subject distance changes. The brightness of the flash remains constant. However, even a long Speedlite flash is very brief and you are unlikely to notice much difference between short and long electronic flash exposures either as you shoot, or in the results. Privacy statement. By using this site, you agree to our use of cookies and our Privacy Policy. I saw it for very very cheap and got it. You're better off with the camera's built-in flash until you can afford something that will work. With respect, I don't think that is right. While the 420 was superseded by the 430 it is listed as an accessory for the 10D among others. The instructions were produced in 2000 so the Digital Rebel isn't listed. The instructions were produced in 2000 so the Digital Rebel isn't listed. But, the flash that the OP has is the 420EZ that is EZ not the 420EX. The 420EZ is an older flash unit that does not communicate properly with any of Canon's DSLR cameras. You might be able to get a consistent full power manual flash from the 420EZ.

If so, you could use a guide number and use the flash as a basic manual flash and control the exposure with the aperture based on the subject to flash distance. This might be cumbersome, but still workable. Enjoy! Lon Note to self RFM I stand corrected. COOKIES DISCLAIMER This website uses cookies to improve your user experience. UserFriendly Manuals. Product Instructions. I want to buy a Canon Speedlite. What would the difference be to my G2 between an older 420EZ and the newer 420EX I want to buy aThe 420EZ will only fire at full power with the G2. If the 420EZ has its own manual controls, then perhaps that is good enough. With ATTL Advanced TTL flash metering, an EOS camera measures a preflash usually IR beam while the shutter is pressed halfway, during ambient light metering. The G2 does not have the circuitry for this style of flash metering, so therefore the 420EZ will only work as a fullpower manual flash. With the EX flashes, if you watch carefully, you will actually see the preflash from the main flash tube just a fraction of a second before the real exposure. Try it out with your G2. To take advantage of the full auto ETTL flash metering with your G2, you definitely want an EX flash. I have a 550EX and use it all the time with my G2 its great albeit a bit bulky egI want to buy aThe 420EZ will only fire at full power with the G2. If the 420EZIt is clear the the EX models are the way to go. Do you have any preferences between the 380EX, 420EX, and the 550EX Aloha.HH So, they are designed to be more compact compared to 380EX. As for whats the difference between 420EX and 550EX, check out this link If you dont mind the cost and the size, 550EX is the way to go. Beluga Harvey HartensteinThe 550 is a great flash, but I originally bought it for my EOS3 which I had before I added a G2.
